

WATER GOVERNANCE IN CITIES: AN OECD SURVEY

Aziza Akhmouch, Head, OECD Water Governance Programme
Oriana Romano, Policy Analyst, OECD Water Governance Programme

10th EWA Brussels Conference “Water in the Cities”
November 18, 2014 Brussels, Belgium

BACKGROUND

THE PROJECT

- Analyze the relationship between **governance structures** for managing water and **the performance** of water policy outcomes
 - Identify **governance mechanisms** dealing with fragmentation across people, places and policies (3Ps)
-

- **Questionnaire** to cities above 500,000 inhabitants, from OECD and BRICS
 - **Case studies** of innovative urban water governance practices
 - **Cluster analysis** to synthesize information on multiple dimensions
-

- **Policy makers** at local and national level
 - **Water managers** at city and metropolitan level
 - **Stakeholders** involved in urban water policy design and implementation
-

- **Taxonomy** of cities and comparative data
 - **Policy recommendations** for local-national decision-makers
 - Cities "**Profiles**" (who does what, challenges, policy responses)
-

OECD Survey: geographical coverage

Preliminary results based on **30** cities

Acapulco, Amsterdam, Athens, Barcelona, Budapest, Calgary, Chihuahua, Cologne, Copenhagen, Culiacan, Edinburgh, Glasgow, Grenoble, Hong Kong, Krakow, Liverpool, Malaga, Mexico city, Milan, Montreal, Nantes, New York City, Oslo, Phoenix, Rome, Singapore, Stockholm, Toluca, Veracruz, Zaragoza

Updated results based on **40+** cities by the end of November 2014

Including: Belo Horizonte, Bogota, Bologna, Lisbon, Lyon, Marseille, Monterey, Naples, Okayama, Paris, Prague.

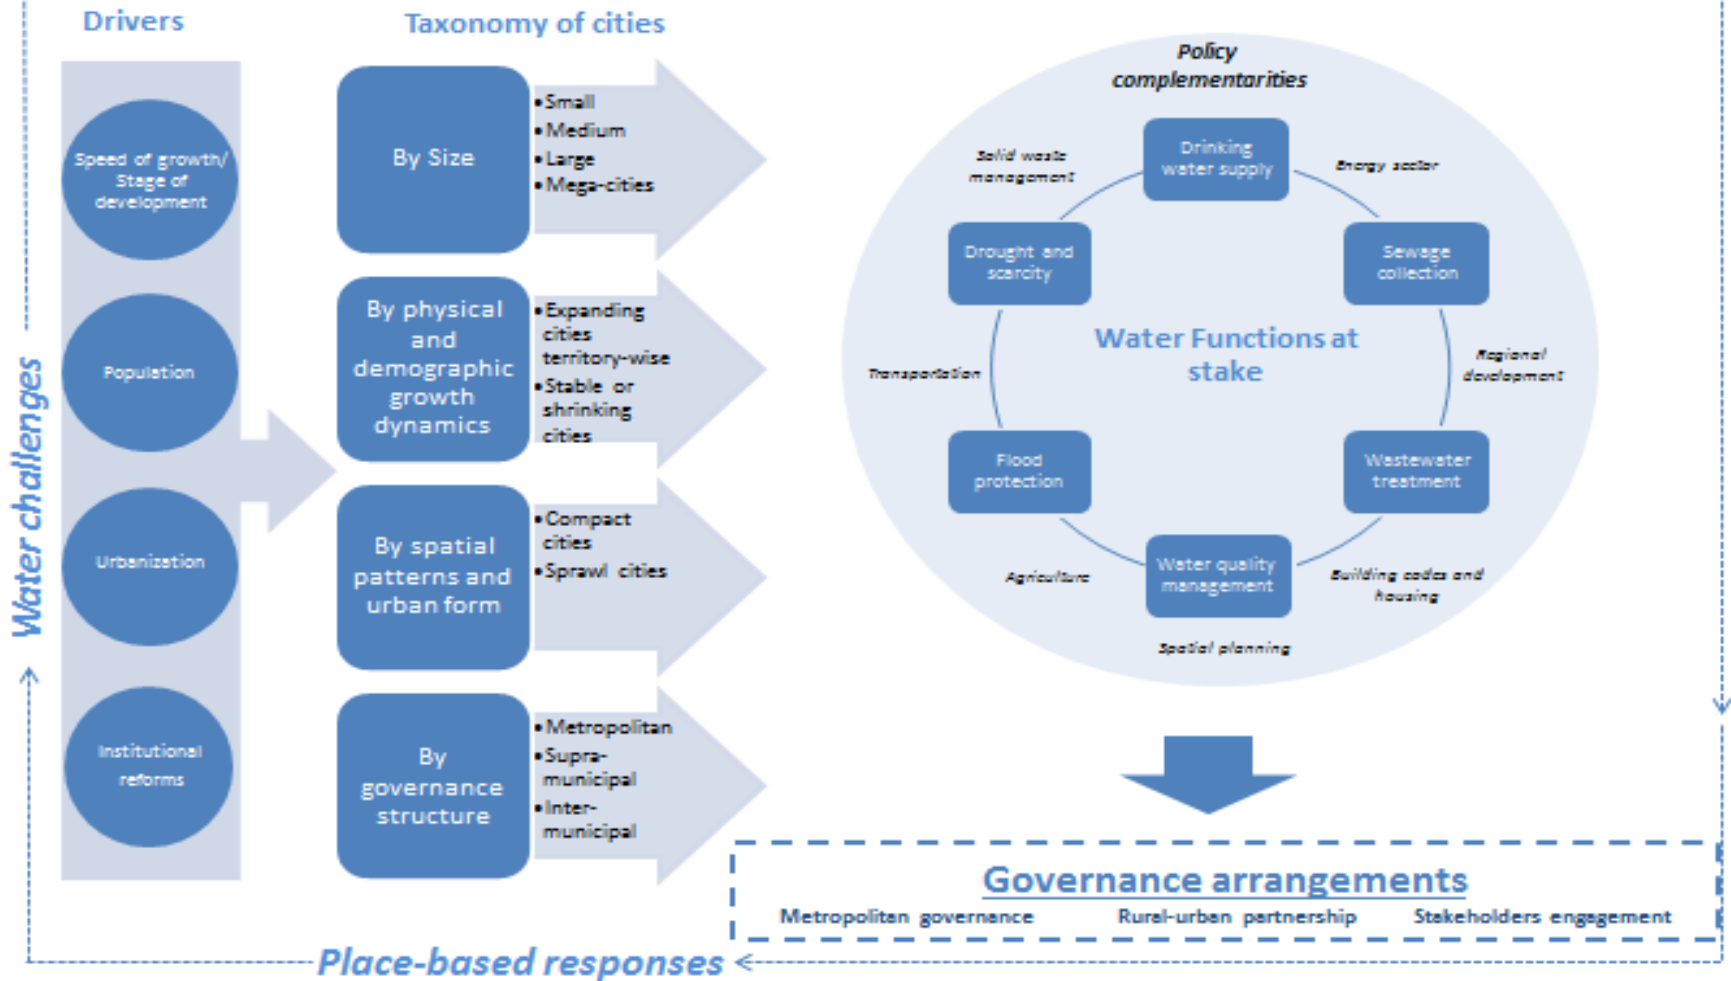

Expected contribution by 2015 from **70** cities from OECD and BRIICS

Country coverage: Austria, Belgium, Denmark, France, Germany, Hungary, Ireland, Italy, Spain, Switzerland, Netherlands, Finland, Norway, Poland, Czech Republic, Slovak Republic, Portugal, United Kingdom, Canada, United States, Slovenia, Korea, Chile, Mexico, Australia, South Africa, Brazil, China, Colombia, Turkey

ANALYTICAL FRAMEWORK

Different capacities to respond →

PRELIMINARY RESULTS

Keywords associated to urban water

Note: Words selected out 65 options and ranked first on a scale from 1 to 5.
Source : OECD, 2015 forthcoming, Water Governance in OECD Cities.

Drivers for adaptive urban water governance

Economic, social and environmental drivers

- Climate change
- Economic crisis
- Urban growth
- Growing population
- Fiscal consolidation measures
- Social inequalities
- Emergency-driven management
- Shrinking population

- Water demand: + **55%** globally between 2000 and 2050.
- People at risk from floods: from 1.2 billion today to around **1.6 billion** in 2050 (nearly 20% of the world's population).
- Economic value of assets at risk: USD 45 trillion by 2050 (+ **340%** from 2010)

OECD Environmental Outlook to 2050 (2012)

Governance drivers

- National laws and regulation
- International laws and regulation
- Re-allocation of competences
- Territorial reform
- Liberalization/privatization

- More than **86 cities** among OECD and non OECD countries re-municipalised water services during the last 15 years
- Territorial reforms had an impact in Australia, Canada, Germany, Norway, Switzerland, The Netherlands and the UK.

OECD, Territorial Reviews: Netherlands (2014) and waterjustice.org

Water- related drivers

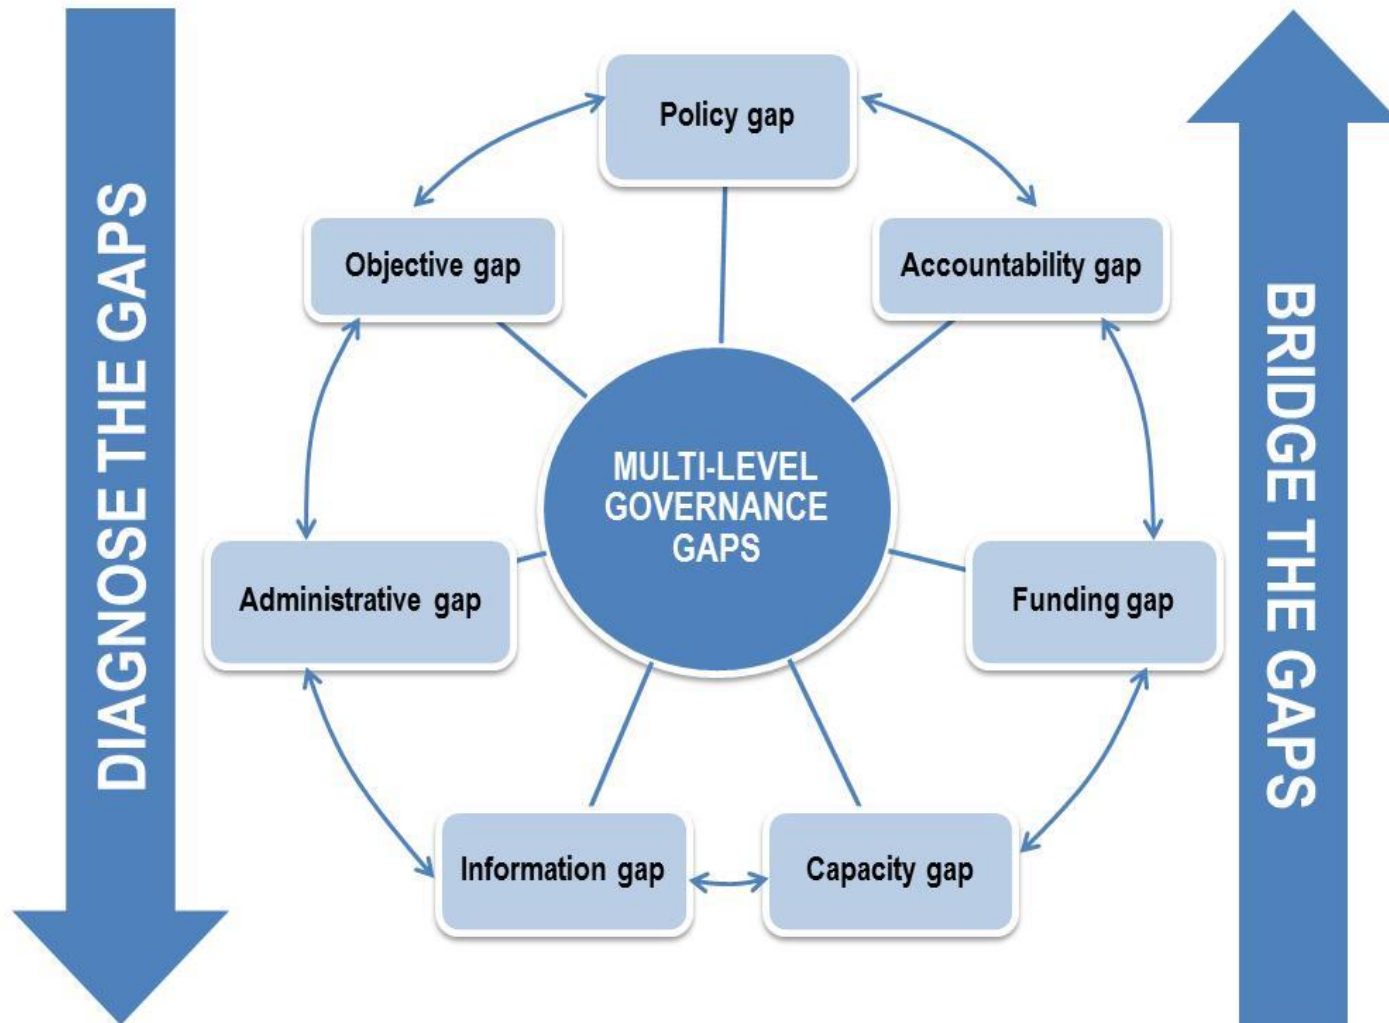

- Ageing, obsolete infrastructure
- Extreme events
- Water pollution
- Water in the political agenda
- Implementation HRWS
- Competition over water allocation

- For OECD countries as a whole, investment requirements in the water supply and treatment sector are expected to increase by almost **50%**.

OECD, Compact City Policies (2012)

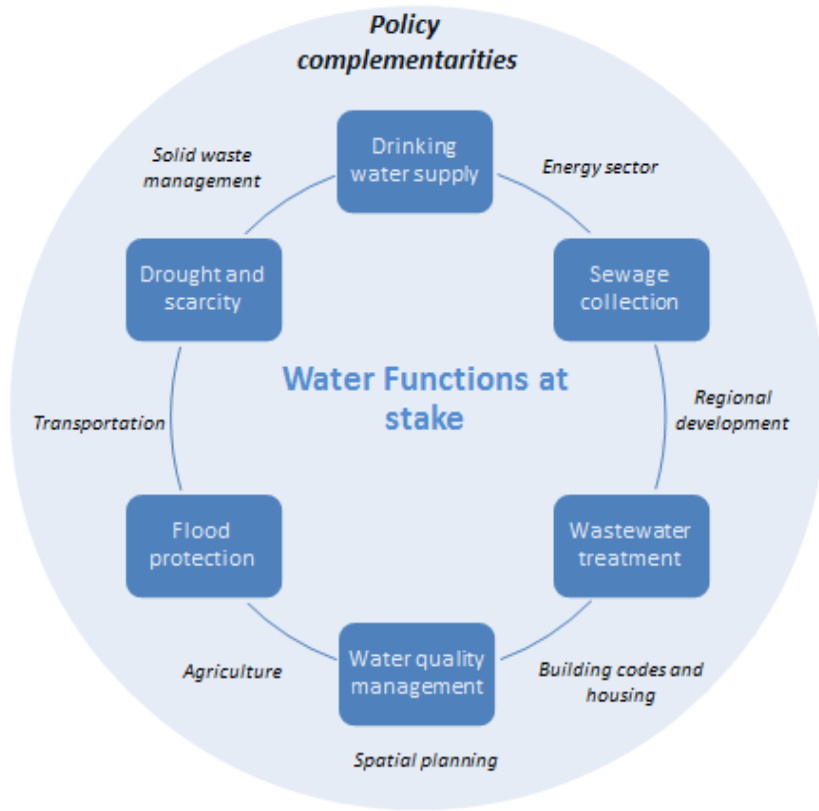

Obstacles to effective urban water governance

Fragmentation across policies

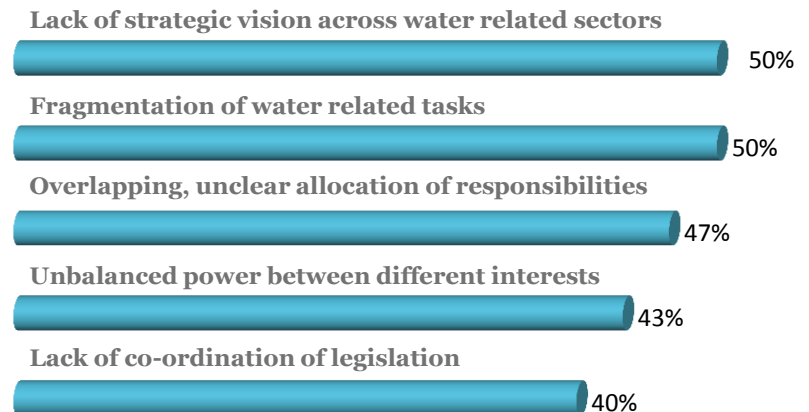

Policy areas influencing water governance in cities

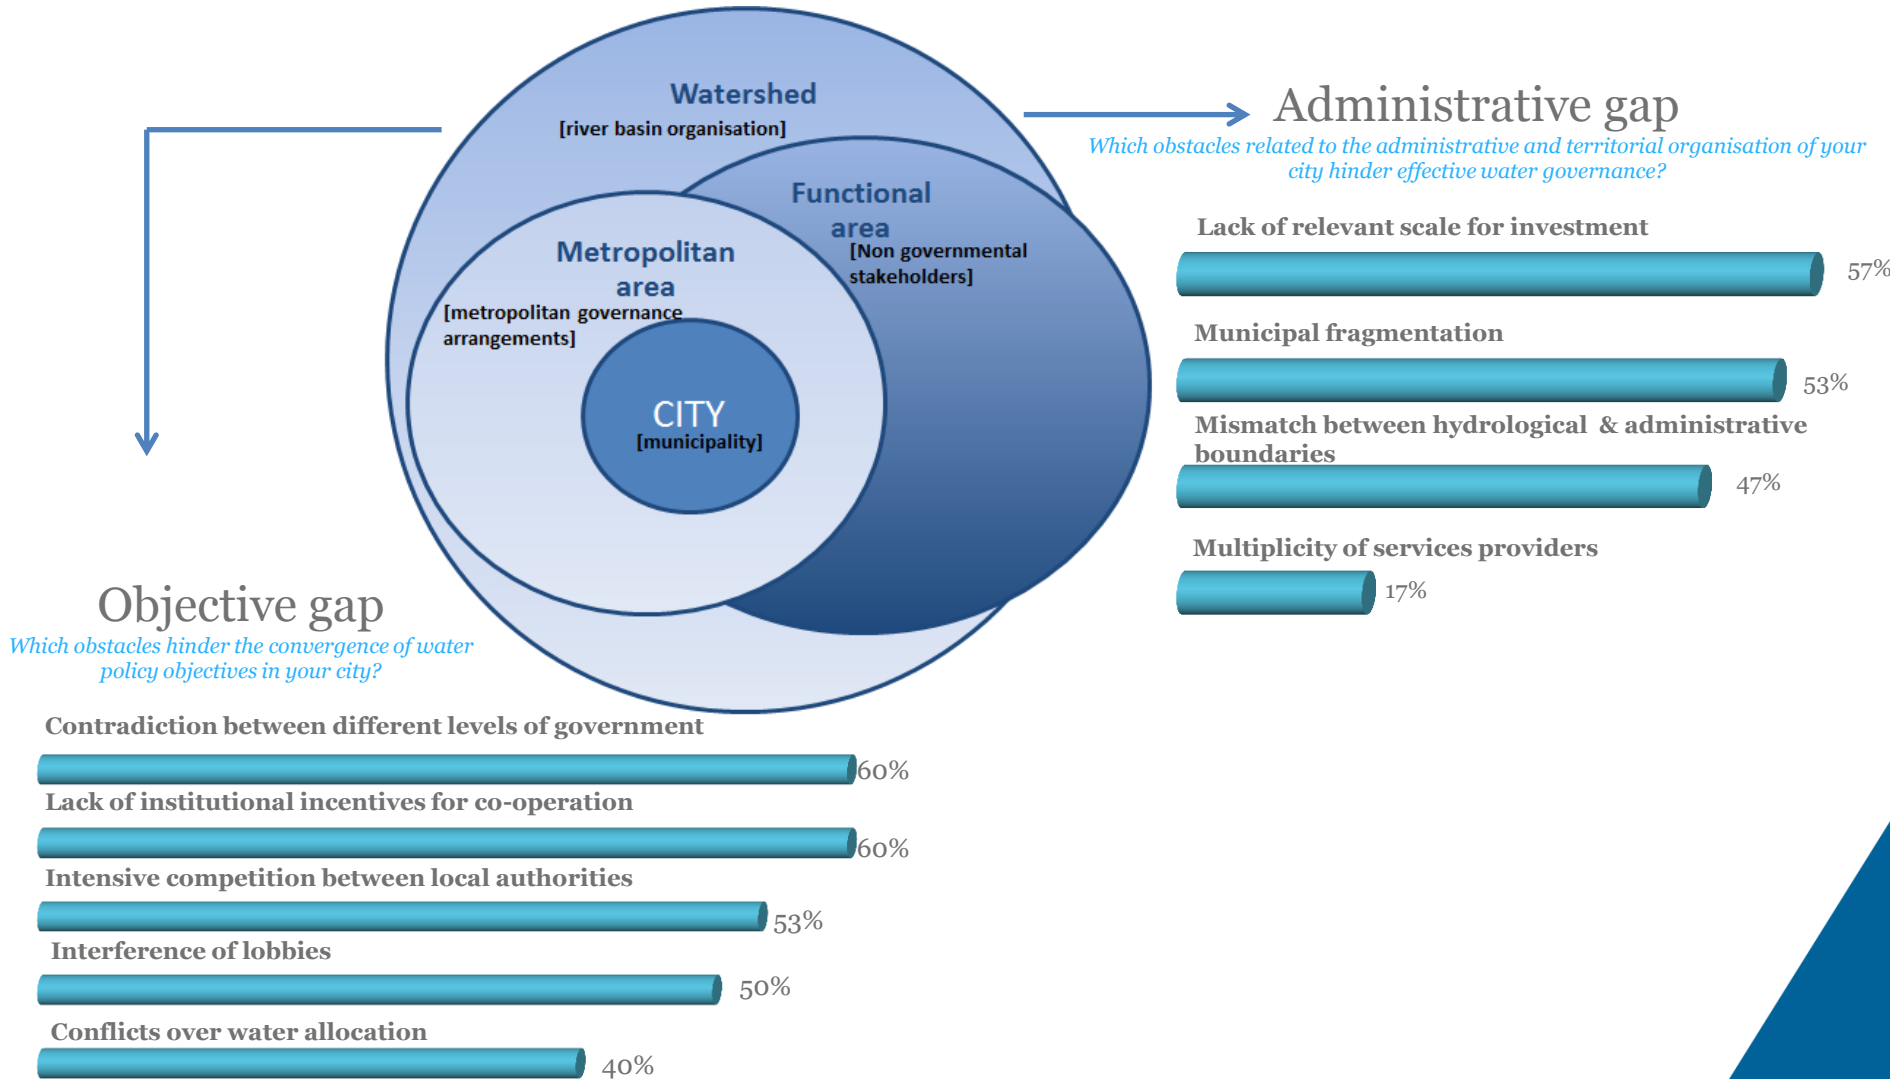

Policy gap

Which obstacles hinder policy coherence and consistency on water in your city?

Fragmentation across authorities and places

Capacity challenges at sub-national level

Information gap

Which obstacles hinder effective use of information to guide decision-making on urban water management?

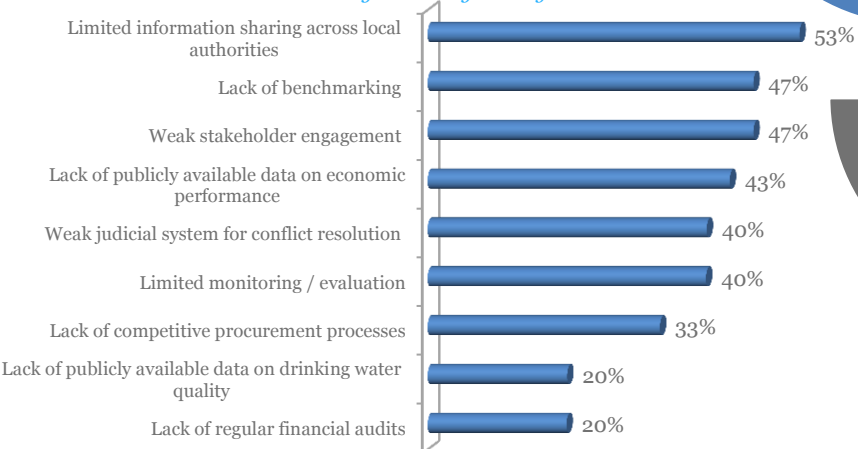

Funding gap

Which obstacles hinder the financial sustainability of water management in your city?

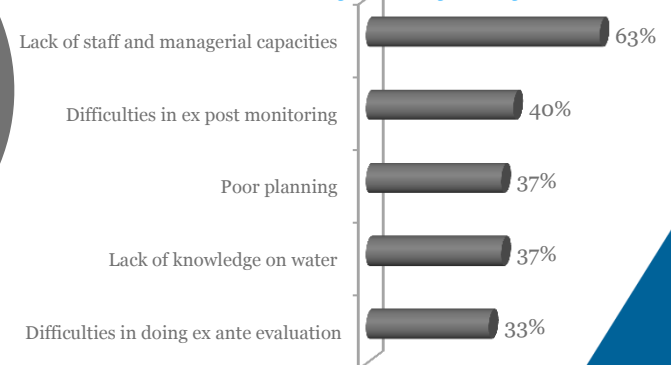

Accountability gap

Which obstacles hinder transparency and accountability of water management in your city?

Capacity gap

Which capacity challenges hinder the performance of water management in your city?

Sample data collected in the Survey

Water consumption (m³/inhabitant/year)

Share of water loss (leakage rate)

As a percentage of net water production (delivered to the distribution system)

Share of wastewater treated

Percentage of wastewater produced by the city that is collected and treated to at least a basic/primary level

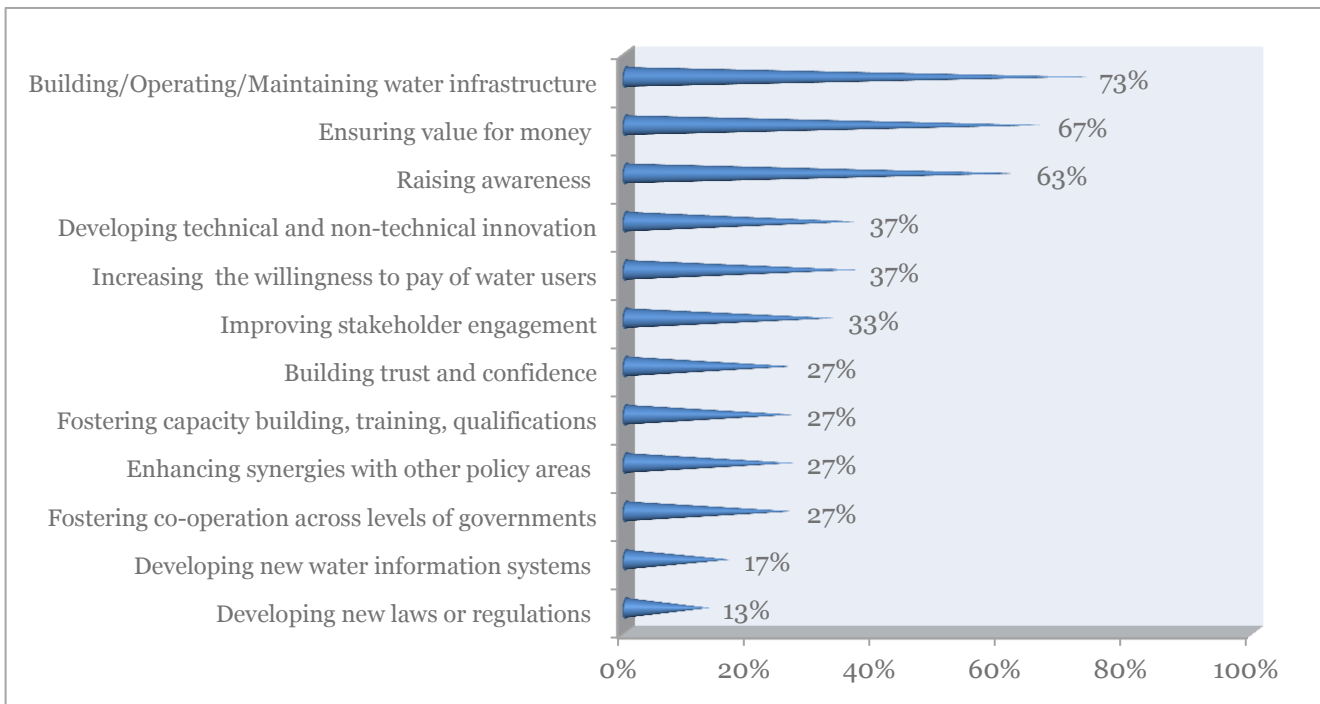

Price of m³ of domestic water (Euro/m³)

Cities' forward-looking strategies

Cities' top priorities in managing urban water

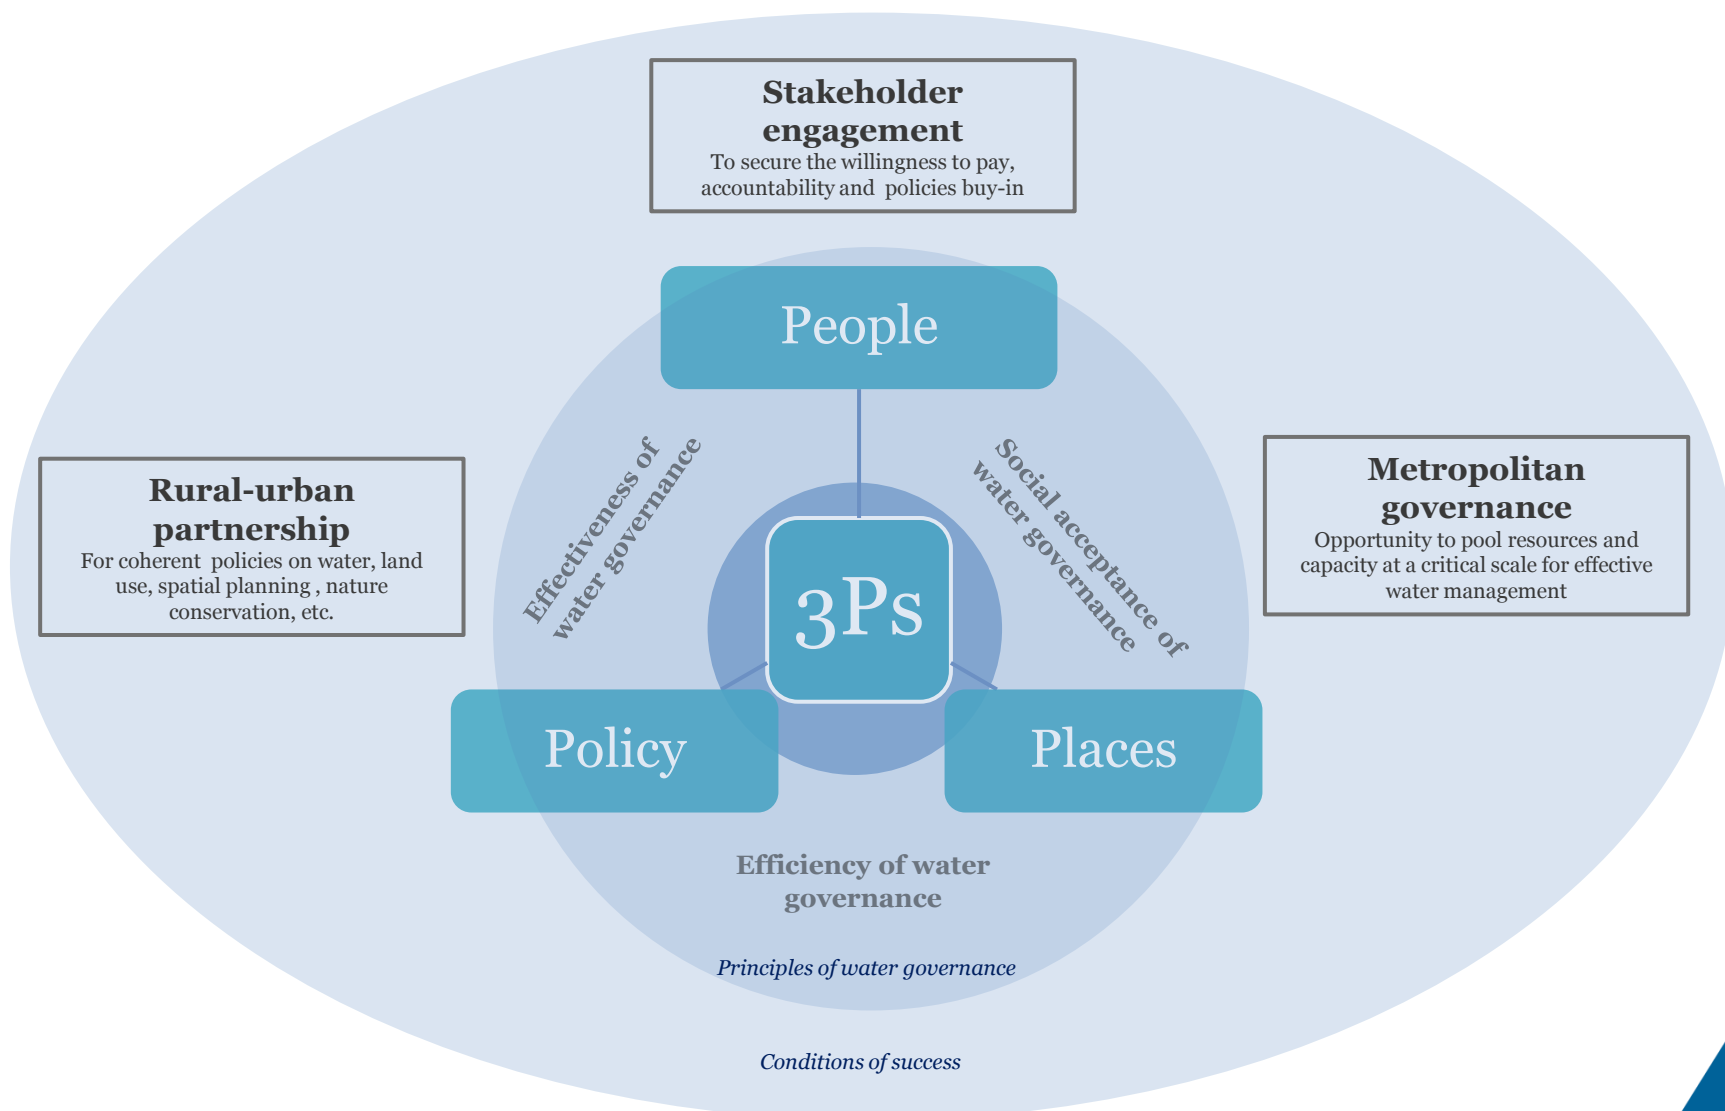

POLICY RESPONSES

A Systemic Approach to urban water governance gaps

Effectiveness of water governance

Focus on → Rural- Urban partnerships

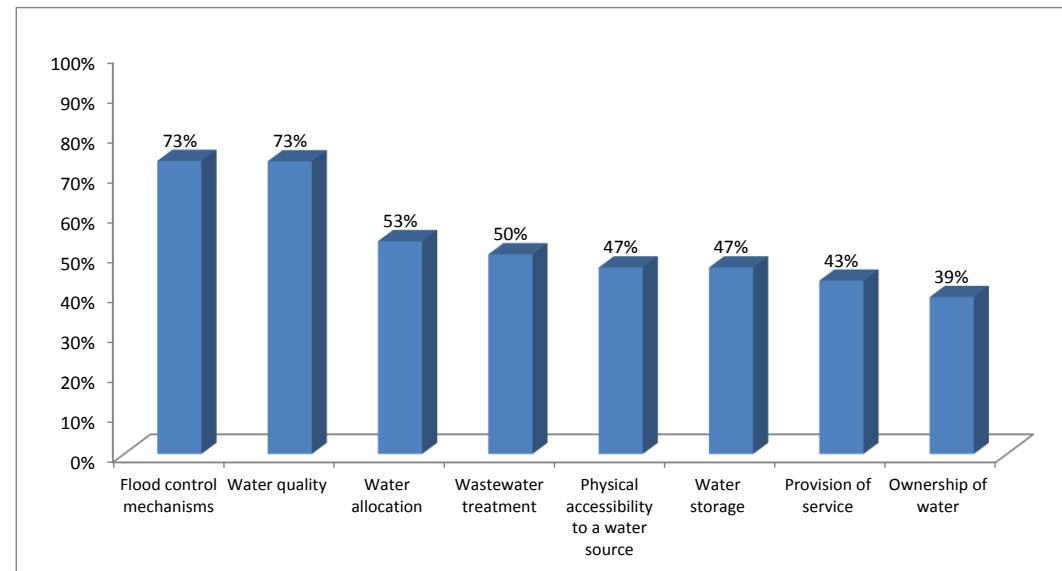

Facts

- **73%** of surveyed cities reckon **flood control** and **water quality** as the major issues generating interdependencies between cities and surrounding areas
- **1/3** of surveyed cities set up policy **mechanisms for coordinating urban-rural areas**

Opportunities

- A positive two-way interaction between rural and urban areas should be promoted to **build synergies, manage trade-offs** and **foster complementarities** across places and policies.
- Rural-urban partnerships can help **integrate water management** between cities and their hinterland

Issues generating interdependencies between cities and surrounding areas

Note: Results based on a sample of 30 respondents who indicated the issues being “very important” and “important”.

Source : OECD, 2015 forthcoming, *Water Governance in OECD Cities*.

Efficiency of water governance

Focus on → Metropolitan governance

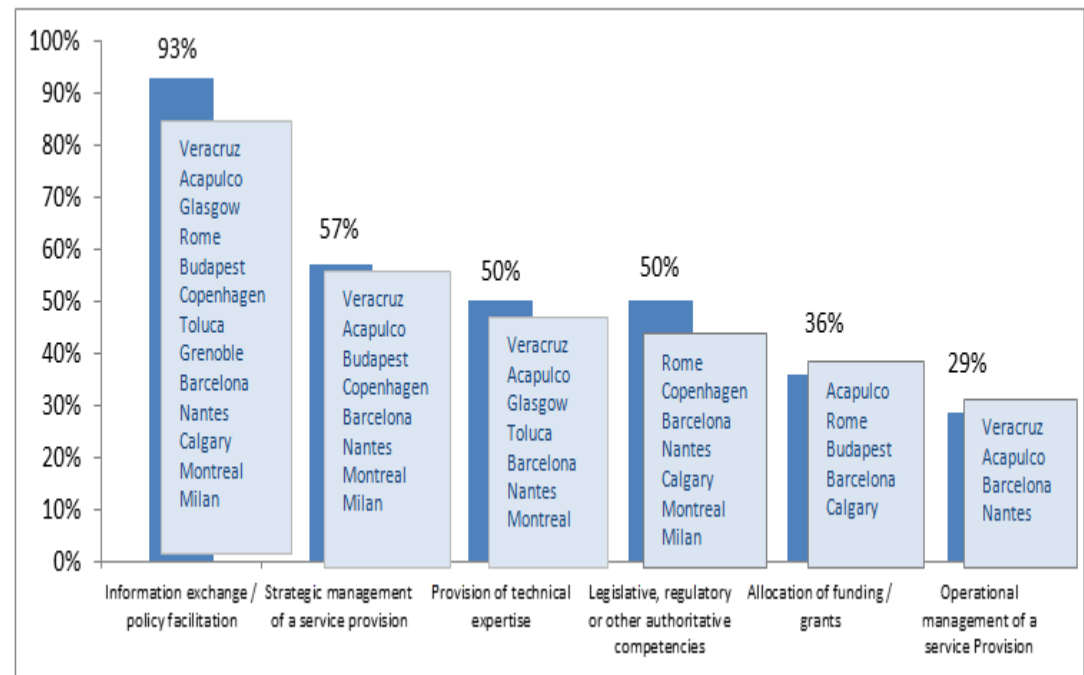

Facts

- 47% of surveyed cities has a **metropolitan body**
- In **93%** of cases metropolitan bodies have competences on water in **information exchange / policy facilitation**
- **40%** of cities implemented **inter-municipal coordination mechanisms**

Opportunities

- Enhancing **information sharing** and costs saving for projects on water
- Promoting **policy complementarities** across different sectors
- Integrate **planning, policy making, strategy setting** and service provision across municipalities
- OECD (2013) points out the pressing need to build more effective metropolitan governance for stronger, more inclusive and sustainable growth in a context of recent crises and long-term pressure on **public finances**.

Competences on water of metropolitan bodies

Note: Results based on a sample of 14 respondents who responded “yes” to the options provided

Source : OECD, 2015 forthcoming, *Water Governance in OECD Cities*.

Social acceptance of water governance

Focus on → Stakeholder engagement

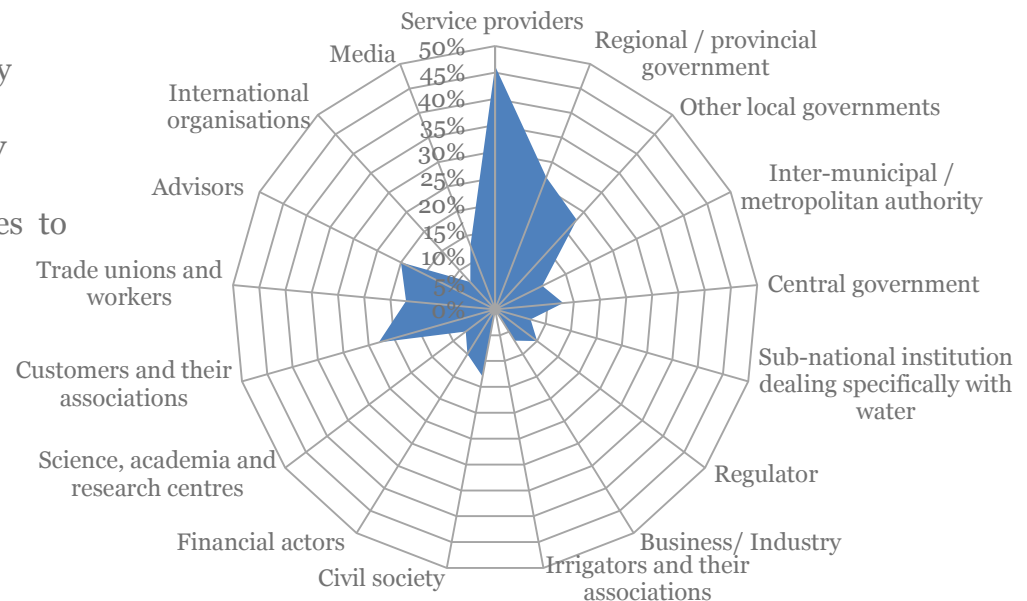

Facts

- **Complexity of issues** at hand and the **resistance to change** are the major obstacles for engaging stakeholders (**50%**)
- **Service providers** are the main counterparts of city departments (**46%**)
- Cities **rarely** interact with **irrigators, civil society and business**
- **77%** uses **web-based communication** technologies to engage with stakeholders

Opportunities

- Building **trust** and ownership
- Securing the **willingness to pay** for water services
- Raising awareness on current and future water challenges
- Ensuring the **accountability** of city managers and service providers to end users and citizens
- Managing **conflicts** on water allocation
- Ensuring the **political acceptability** of different ownership models
- Setting **convergent objectives** across policy areas.

Interactions between the city department and stakeholders

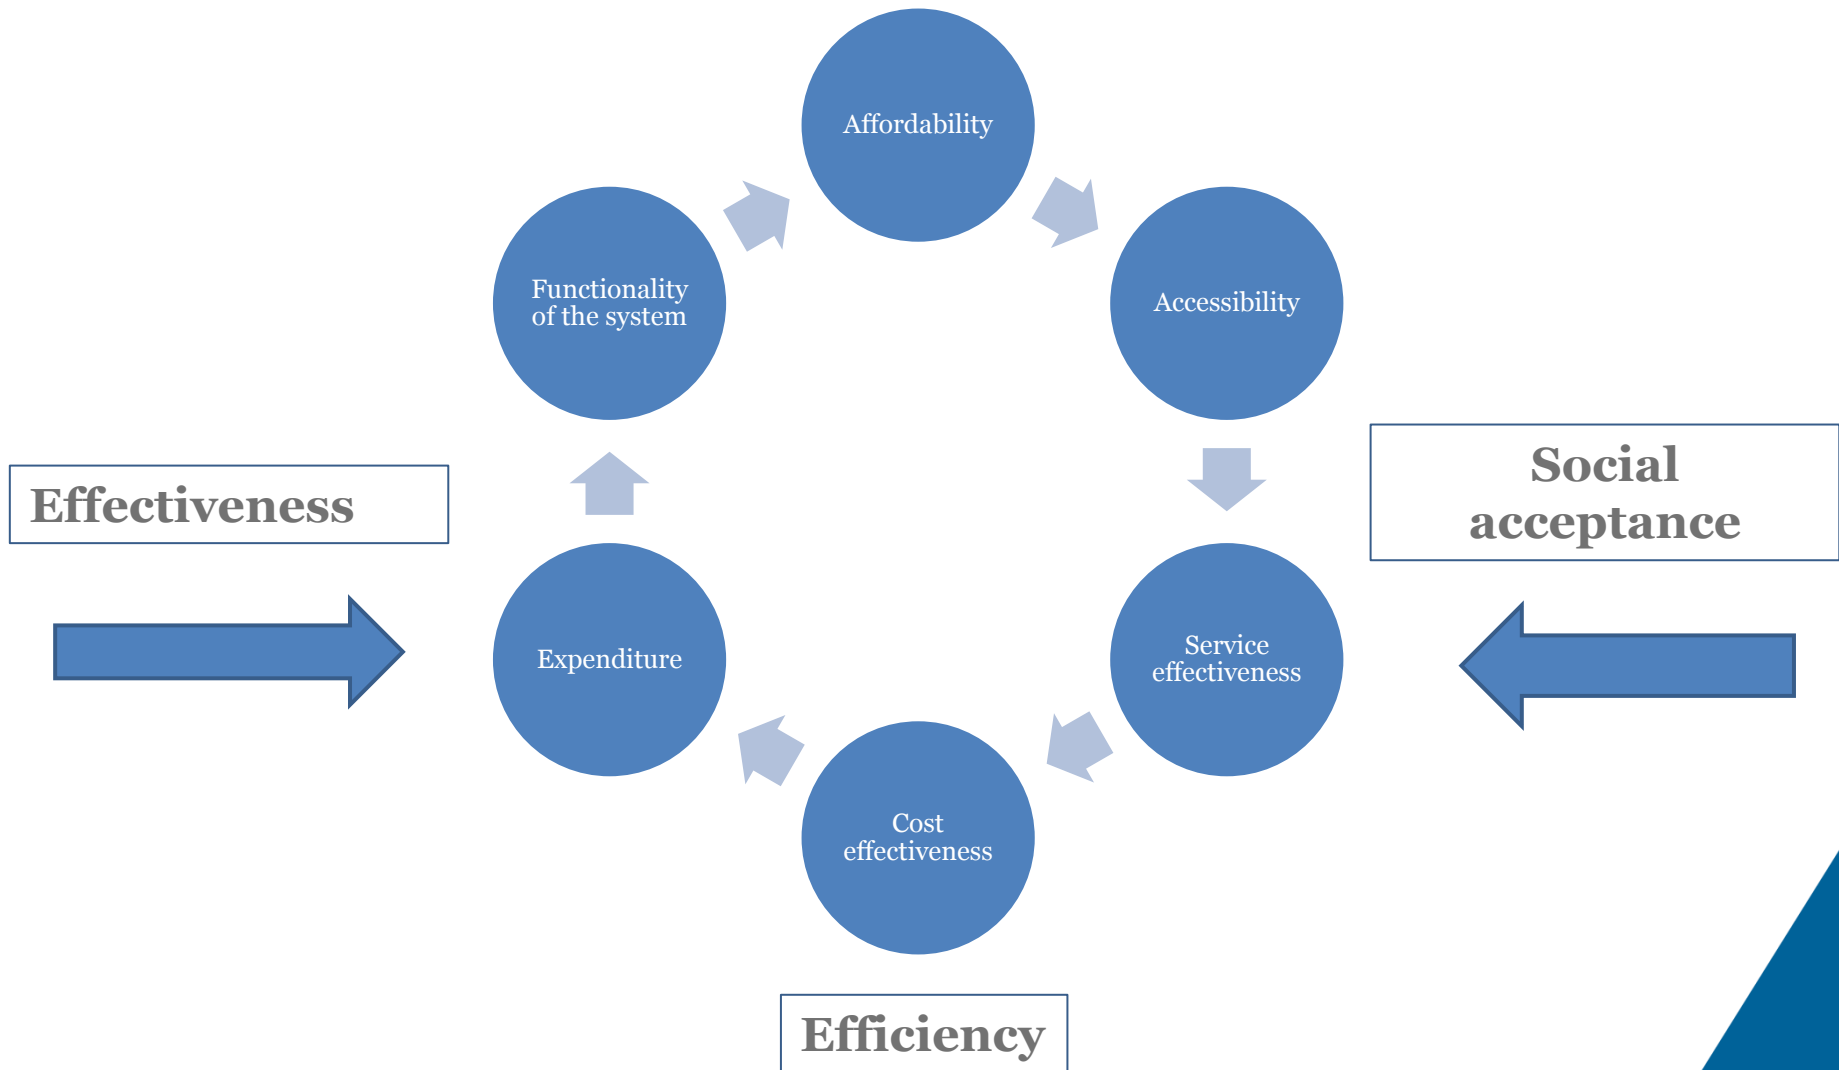

Note: results based on a sample of 30 respondents who indicated the interactions to occur "always, very frequent"
