European Water Academy Launched to Strengthen Skills and Knowledge

The European Water Academy has been launched as a flagship initiative of the European Water Resilience Strategy to strengthen skills, knowledge exchange and collaboration across Europe's water sector. As one of the Academy's eight First Champions, the European Water Association will contribute its expertise and training activities, including its Introduction Course to EU Water Policy and Legislation. The initiative provides an important platform for connecting research with practice and equipping water professionals with the knowledge and skills required for a more resilient European water future.
