

Issue 3/2022

Eawag publication on decentralised resource recovery from waste water, May 2022

Eawag Newsletter is published by the Swiss Federal Institute of Aquatic Science and Technology (Eawag)¹. It is published six times a year and provides information on current research and development projects, publications and events at Eawag. In addition, two special newsletters a year provide in-depth information on a current research topic at Eawag.

The May 2022 edition is dedicated to decentralised resource recovery from waste water.

EWA News presents you an outline of the contents of this May 2022 publication, plus links to the full texts.

¹ Eawag is the Swiss Federal Institute of Aquatic Science and Technology and is part of the ETH Domain, which includes the two universities of ETH Zurich and ETH Lausanne (EPFL), the four independent research institutions of Empa, PSI, WSL and Eawag. Firmly anchored in its home country of Switzerland, but with a global network, Eawag is concerned with concepts and technologies for dealing sustainably with water bodies and with water as a resource. In collaboration with universities, other research institutions, public bodies, industry and non-governmental organisations, Eawag works to harmonise ecological, economic and social interests in respect of water usage. The Institute thus serves as a bridge between the scientific world and the 'real world'.
